

e-netcamS.D.K. IProNet 's Software Development Kit

e-netcamS.D.K. allows the integration of IProNet 's IP video management technology in any application, in an easy and flexible way.

Benefits:

- Differentiate from the competition
- Integrate a leading technology and take advantage of a proven technology present on the market since 2002
- To offer added value to the customers

Functionalities:

- Monitoring, configuration and on demand recording of cameras
- PTZ camera control and professional joystick support
- Recordings visualization
- Devices activation
- Configuration, reception and test of alarms
- Text strings associated to recordings
- Etc.

Applications

Integrate IProNet 's IP video solutions in your application, with ease and within minutes.

IProNet 's S.D.K. consists on the following libraries:

- **IPNRMSControlLib.** Allows the user to obtain camera's and recording's information, live camera's visualization, on demand recordings, display of the recordings and to activate devices
- **IPNAlarmsLib.** Alarm reception generated by cameras and videosevers, as well as alarm simulation
- **IPNEvents SDK.** Text strings associated to recordings
- **IPNCounter Stats.** Obtaining e-netcamCOUNTER statistics (counting solution)
- **IPNANPRLib.** Allows the user to remotely manage a system with e-netcamANPR (Analytics Number Plate Recognition) installed, as well as to receive license plate recognition and system configuration data

LEADING IP VIDEO
