

Net-IMC

Multidevice IP controller for IP video solutions.

Net-IMDC is a digital input and output control and monitoring device, that can be integrated in the e-netcamVMA architecture. It enables equipping an IProNet video installation with the capacity for monitoring and acting on digital input/output devices, increasing the control of the installation.

Inputs-Outputs

- 8 digital inputs and 8 digital outputs extendable to 24
- Dry contact type digital inputs
- Digital outputs in 5 to 40 V open collector

Actions:

- Interface via web
- DYNDNS support
- Autonomy
- Scalability - Integration
- Possibility for unlimited extension of the number of Net-IMDCs in the installation
- Alarms SDK
- Sending CONTACT ID to C.R.A.

Application fields:

- Advanced telemonitoring (IP video integration with presence detectors, magnetic door opening contacts, temperature detectors, etc.)
- Domotics (remote control via IP of domestic devices, turning lights, central heating on, closing blinds, etc.)
- Process automation (installation TECHNICAL ALARM control, control of small industrial processes)
